QUICKDRY

If it's not Urecel It's not Quickdry

Urecel quickdry is a remarkable substance with many superior qualities, technically and aesthetically. It's more luxurious to sit and lay on. It keeps its shape better than anything else. The unique 3D open-cell structure of urecel quickdry foam is exceptionally porous, draining water rapidly while circulating air with optimal efficiency.

Urecel Quickdry Structure

Urecel QuickDry is produced by a sophisticated process called Hydro-Blast Reticulation. This is what gives Urecel QuickDry its unique porous open-cell structure – and why it completely outperforms closed-cell, non-reticulated, regular foams.

The large, open pores in Urecel QuickDry allow water to drain very rapidly and fresh air to circulate freely and continuously.

Urecel QuickDry feels more comfortable and luxurious, but is also stronger and more supportive. That's why our cushions keep their shape. Uregard is an anti-microbial technology which prevents the growth of common moulds and fungus. Uregard protection is built into every Urecel QuickDry cushion.

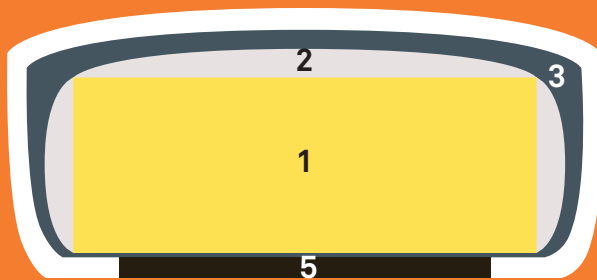

Around the world

From exclusive beach resorts to leading big city hotels, super yachts to super homes – you'll find urecel quickdry outdoor cushions in use at luxury locations all around the world. Every day of the year, rain or shine.

Urecel QuickDry in 7oceans

What's inside the cushion

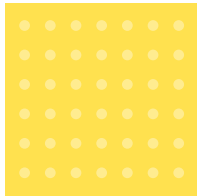

1. Urecel Quickdry
2. Polyester non woven provides extra plushness. Whole cushion looks full. Eliminates wrinkles on the outer cover.
3. Mesh fabric lining
4. Outer cover (Outdoor fabric*)
5. Open-weave mesh fabric allows water to drain out of the cushion. If the cushion is reversible place fabric mesh at the back of the cushion.

Why should i use urecel quickdry foam

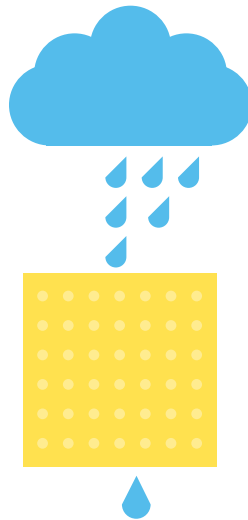

QuickDry Foam®

Mold forming on normal foam

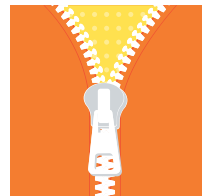

In-built Uregard anti-microbial technology prevents moulds. Urecel QuickDry is the advanced, high-performance foam designed specifically for outdoor cushions.

Urecel QuickDry is produced by a sophisticated process called Hydro-Blast Reticulation.

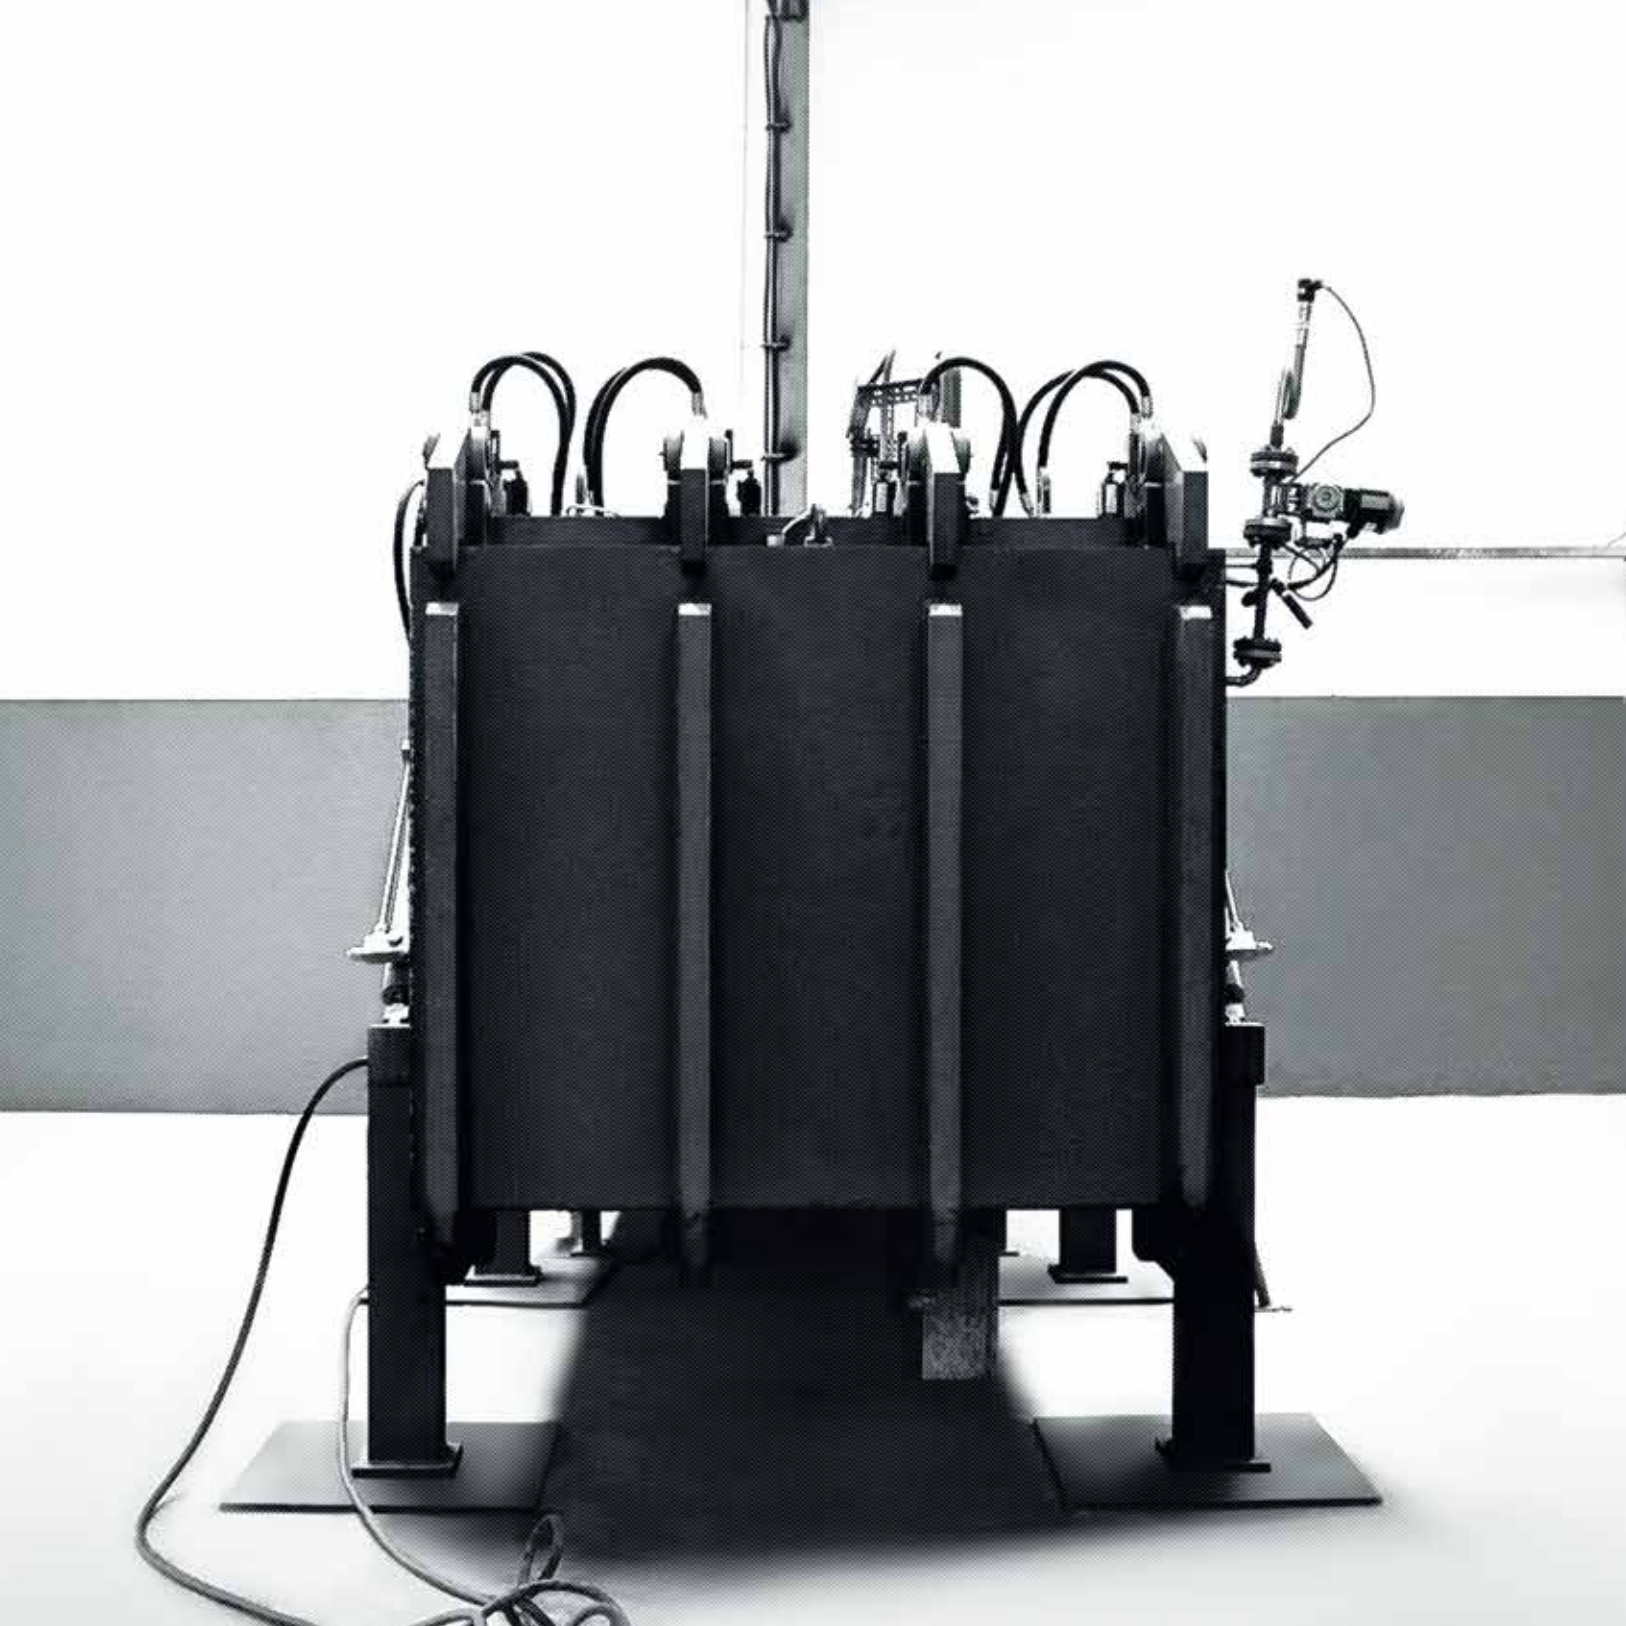

Water and air/humidity (through seam)

Water and air/humidity (through zipper)

Our seams and zips are designed to release air and humidity.

Partner brand

Comparison drying rates

Comparison between normal foam and Urecel QuickDry

- Both foams with a size of 35x35x5cm were soaked by pouring 500ml of water directly from above.
- At a room temperature of 28°, both foams were left to dry on a mesh tray for 5 hours.
- They were then measured by weight to evaluate the remaining water content.

*Refer to graph numbers

1. 500ml of water poured onto both foams.
2. After 60 seconds normal foam retained 80% water
3. After 60 seconds Urecel QuickDry foam retained only 40% water.
4. Highlights the difference between normal foam and Urecel QuickDry.
5. After 3 hours Urecel QuickDry is practically dry. Normal foam still retains 71% water volume.

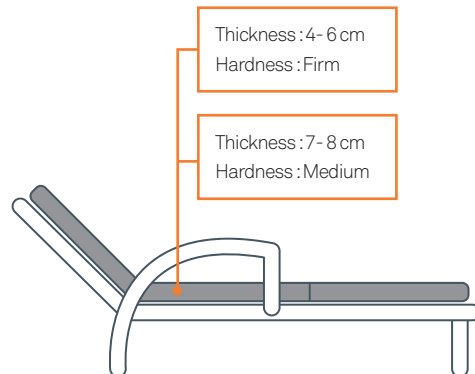

Seat cushion recommendation

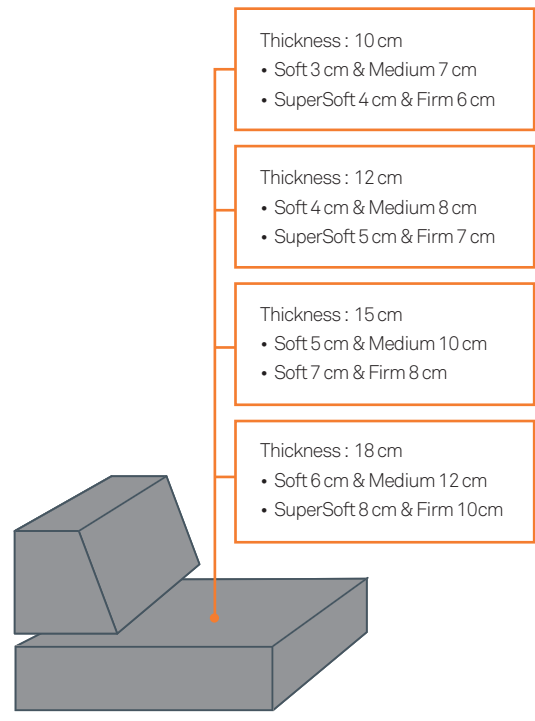

Urecel Quick Dry is available in four levels of firmness and you can use different combinations to get the exact comfort fit. You can also add polyester non-woven padding for extra plushness.
